

Datasheet Control Center Supervision tool

100%

Fig. 1: Web interface of administration

Overview

The Control Center of M2Msoft is acting as a supervisor for the different products of the M2Msoft range. It undertakes two main functions: the supervision of the machine (system and network parameters) and the supervision of the VoIP functionalities (S5000, G4000, C3000, ACD7000, etc.).

The Control Center is exclusively provided on the hardware servers of the M2Msoft range.

Functionalities of the solution

- Supervision and activation of the applications
- System administration of the machine
- Definition of the networks parameters: 3 eth interfaces, GW, DNS and static routes
- Management of an integrated DHCP server and permanent leases
- Management of an integrated NTP server
- Launching/Start/Restart/Halt of the applications
- Archiving and downloading of the log files
- Updating of the M2Msoft products
- Automatic backup of the configurations

How to buy?
