

GR4600 IP Recorder

Overview

The GR4600 is a communications over IP recorder with archiving and recording consultation functions from a web portal or from the phone.

Available in option with the S5000 IPBX by M2Msoft, the GR4600 can also be sold separately and be integrated to every SIP compatible PABX or IPBX of the market.

Advantages of the solution

- **Strong accessibility of the service:** the GR4600 enables to listen, listen again, delete and save recordings from different terminals (telephonic post, smartphone and every equipment with an internet access).

- **Advanced and secured automation:** Fully transparent, the launching of the recording is done automatically and doesn't disturb the user. A lot of criterions allows to activate or not the recordings on a case by case basis (internal/external calls, source/destination patterns, users' options). It is also possible to modify the typology of the signal via the web interface of administration.

Besides, the users' access rights are defined by the system administrator.

- **Easy data recovery:** The archiving in ISO/DVD format can be automatized. The picture can then be burnt locally (burner in option).

Functionalities of the solution

Advanced functionalities

- Listening to the recordings: fixed phones, mobile and web
- Selective recordings
- Timestamp and displaying of extensions/uid
- Recording signal; configurable
- Burn on DVD automatized
- Easy switch through prefixes manipulation
