

VGUARD100 IP Firewall

Overview

The VGUARD 100 is a VoIP protection system enabling to secure in a transparent way the or various equipments of Voice over IP of a company or the service provider.

The VGUARD100 comes in front of the voice over IP access and automatically analyzes the messages in order to determine their relevance and to detect the abnormal situations BEFORE they get to the telephony system of the company or the service provider.

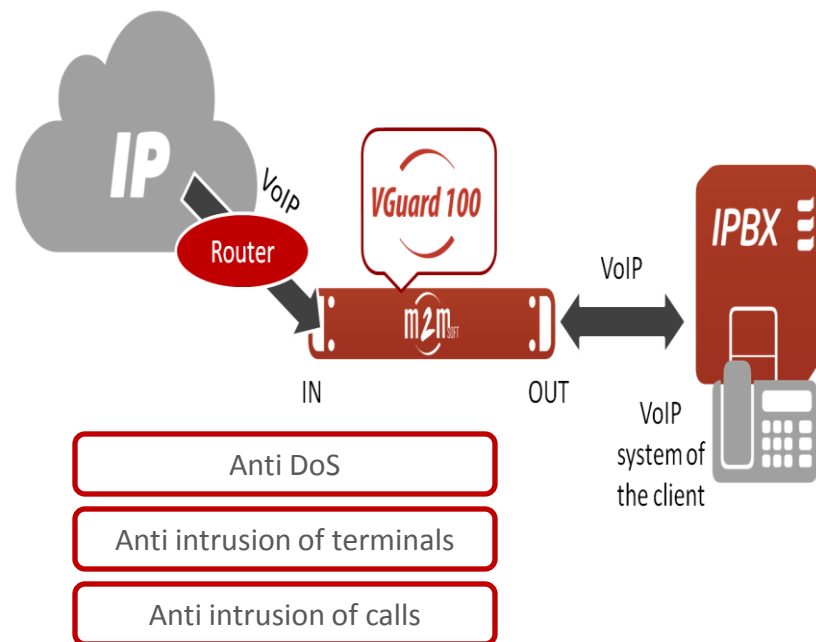

Fig. 1: Environment of the VGUARD100

The VGUARD100 uses learning technics and configurations to control that only the authorized users, equipments SIP trunks can enter on the system. It will block the undesired VoIP messages, analyze and detect the abnormal uses, detect the attacks and protect the client system.

The VGUARD 100 is transparent from the protected system and supports all compatible SIP v2.0 system.
